

POOL RECOVERY KIT

Effective GREEN Algae Treatment

1. Remove all leaves and debris from the pump and weir baskets
2. Plug out the Pool Cleaner
3. Brush the walls of the pool
4. "Backwash" the filter for at least 3-5mins and "Rinse" the filter for at least 1min
5. BALANCE THE pH to 7.4 (or 7.8 see Heavy Algae Infestation)
6. Add Waterwell Pro Sudden Shock
(2 bags per 50 000L of Pool Water)
7. Apply Waterwell Pro Green Out/Black Out
(1L per 50 000L of Pool Water)
8. Apply Waterwell Pro Clear Blue
Light Algae Infestation
(1/2 x 500ml per 50 000L of Pool Water)
Heavy Algae Infestation
(1 x 500ml per 50 000L of Pool Water)
9. Apply Waterwell Pro Drop & Vac
(1 x 1kg per 50 000L of Pool Water)

Effective GREEN Algae Treatment

Light Algae Infestation:

Add ½ bottle per 50 000L of Clear Blue through the weir and allow normal filtration to occur. If filter pressure increases to above recommended levels, Backwash and Rinse and repeat Clear Blue dosage if necessary.

Heavy Algae Infestation:

Add 1 bottle per 50 000L of Clear Blue and 1 x 1kg of Drop & Vac this product should be used only if pH is 7.8 or higher and the Total Alkalinity at 80ppm or higher. Allow the pump to run for 1 hour and switch off the pump for 12 – 24hrs. Vacuum settled debris to waste.

10. Top up water and Plug Pool Cleaner back in

11. In order to prevent further problems; Visit your Pool Care Professional with sample of water for testing and ensure that the water is now chemically balanced. This would be a good time to speak to them about chemically cleaning your filter sand and a Pool Maintenance Program to suite your needs.
